### French Automotive & Mobility Network – CEEAG

French Automotive & Mobility Network is an entity based in Brussels and representing the French automotive and mobility sector to the European institutions. It brings together the French Automotive Industry Platform (PFA) and the four associated competitiveness clusters (CARA, ID4CAR, NextMove, Pôle Véhicule du Futur). Our contribution will summarize the position of the entire sector (including major groups and SMEs), that was developed through an internal consultation shared with all members of the PFA and the competitiveness clusters.

Our contribution is based on an online survey that was circulated among members of the whole automotive and mobility sector. For this consultation, we collected 4 contributions: 4 from SMEs.

In our sector's view, the revised CEEAG will support the acquisition of clean vehicles. This aid is an incentive to purchase and to strengthen economic models. Our sector says it will provide a design methodology with a reduction in cost, in the number of parts and at the lowest cost.

In our sector's view, the revised CEEAG will determine the most appropriate form of aid for clean vehicles. The wider and more varied the volume of support, the more appropriate it will be for the innovative clean mobility actor, and the more the objective of transition to clean mobility will be achieved.

In our sector's view, the revised CEEAG will help to determine the most appropriate form of support for clean vehicles and to increase efficiency.

Our sector supports the inclusion of a new section on resource efficiency and circularity and stresses the need for this change. It should be noted that the design offer of some SMEs in our sector already includes an eco-design approach.
