CRMs and the EU Electricity Market

CAVEAT Do not take me wrong, what follows are innocent questions and comments from a "Euro enthusiastic" (though a little bit cynic and skeptic)

CRMs and the EU Electricity Market _ C. Batlle ental issues behind the ongoing sector inquiry September 28, 2015. City of Brussels, Belgium

The (wo)men in the mirror

• Do environmental policies match with energy markets?

-The shrinking EU market

Is autarky back? Did it ever leave?

– EU or MS energy security?

- Will Member States ever quit aiding?
 - Should they?

Do we need a (more realistic) forth package?

CRMs and the EU Electricity Market _ C. Batlle Capacity mechanisms in Europe: The fundamental issues behind the ongoing sector inquiry Global Competition Law Centre. Monday, September 28, 2015. City of Brussels, Belgium

The question asked

• Energy-only market or a given form of capacity mechanism?

The original sin: the market failure Some light from the classic economic philosophers

> "I've abandoned free market principles to save the free market system"

10

Energy-only what?

 We have heard a lot about them, but has anybody ever seen one?

The forms of CRMs are already given

- •CRMs are here to stay, so it is a waste of time to argue if yes or no, we'd better quickly focus on
 - -preventing flawed designs and barriers
 - -guaranteeing minimum design requirements

If properly designed, CRMs could even help to advance in the integration and efficiency of the Internal Energy Market

CRMs and the EU Electricity Market _ C. Batlle

The forms of CRMs are already given (ii) • If properly designed, CRMs could even help to advance in the integration and efficiency of the Internal Energy Market

-Is it possible to design them properly?

CRMs and the EU Electricity Market _ C. Batlle Capacity mechanisms in Europe: The fundamental issues behind the ongoing sector inquiry Global Competition Law Centre. Monday, September 28, 2015. City of Brussels, Belgium

7

The forms of CRMs are already given (iii)

- •But in the humble opinion of this "longterm" observer, the current trend is heading towards the worst of the scenarios
 - -New non-market oriented patches
 - -Perpetuation of the current market agents' structure (national, vertical and horizontal)
 - -Long-term market cross-border segregation
 - The Internal Electricity Market for Leftovers
 - -Missed (maybe last in many years) opportunity for demand response

Level of the EU market integration

- Apparently, the objective of the EU Commission is to go all the way
- But to what extent the Governments of the Member States really want to go?

• Could not we be cheating ourselves in Solitaire?
