

Comment from company NATURIN VISCOFAN GmbH

Point 4 of the BVE statement deals with carbon leakage protection. We consider it necessary to refer in this paragraph to the competitive threat to the European industry with regard to the emission prices (25 €/t increasing in the BEHG and 55 €/t currently TEHG) from the TEHG and the BEHG. Here, the same framework conditions from the guidelines as in the EEG apply to future subsidies (BECV and electricity price compensation) and a protection of the companies in competition is not possible via the EU subsidy guidelines! If the EEG levy is abolished and the EEG costs are covered by the revenues of the emission markets, this must be taken into account in the guidelines.

Thank you in advance for taking the comment into consideration

Best regards

Carola Ströher-Glowienka
