

ICN Webinar – 16 January, 2019

# *DIGITAL CARTELS & ALGORITHMS*

Antonio Capobianco  
Senior Competition Expert  
OECD, Competition Division  
[antonio.capobianco@oecd.org](mailto:antonio.capobianco@oecd.org)

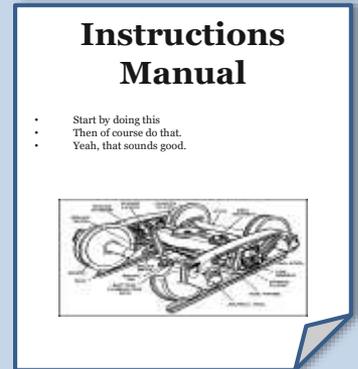

---

*Technology is neither good  
nor bad; nor is it neutral.*

*Melvin Kranzberg*

# DEFINITION OF ALGORITHM

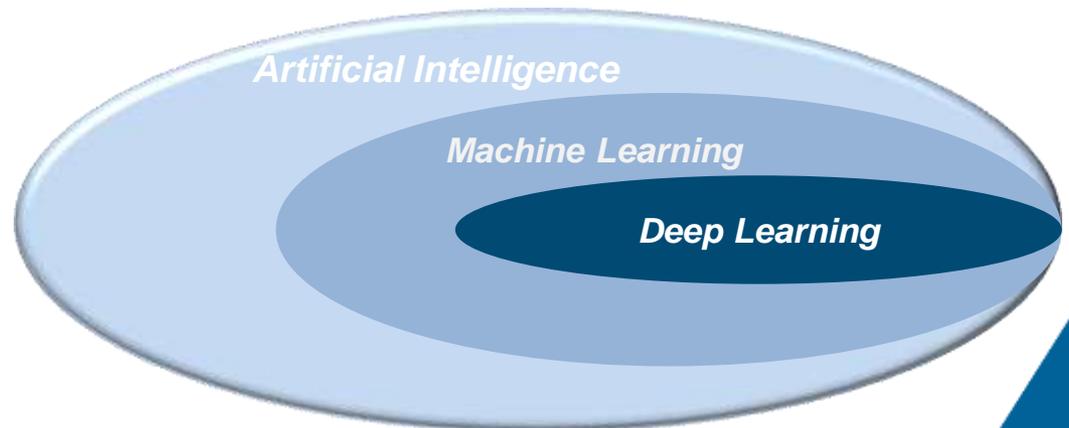

*“An algorithm is an unambiguous, precise, list of simple operations applied mechanically and systematically to a set of tokens or objects. (...) The initial state of the tokens is the input; the final state is the output.”*  
Wilson and Keil (1999)

# PROGRAMMING PRINCIPLES

---

- **Artificial intelligence**
  - Detailed algorithms that mimic human intelligence, “*the science and engineering of making intelligent machines*” (John McCarthy, 1956)
- **Machine learning**
  - Algorithms that iteratively learn from data, “*the ability to learn without being explicitly programmed*” (Samuel, 1959)
  - Learning patterns: supervised, unsupervised, reinforcement
- **Deep learning**
  - Artificial neural networks that replicate the activity of human neurons...

# MACHINE LEARNING (ML) VS DEEP LEARNING (DL)

- Difference: ability to process raw data
- ML requires manual features engineering, while in DL feature engineering is automatic...

Traditional Machine Learning Flow

Deep Learning Flow

# MODERN APPLICATIONS OF DEEP LEARNING ALGORITHMS

## Health

- Melanoma cancer detection
- Detect cancerous cells in brain surgery

## Engineering

- Dispersion of dust in drilling
- Response of buildings to earthquakes
- Prediction of traffic conditions

## Finances

- Buy and sell stocks
- Predict corporate bankruptcy

## Biology

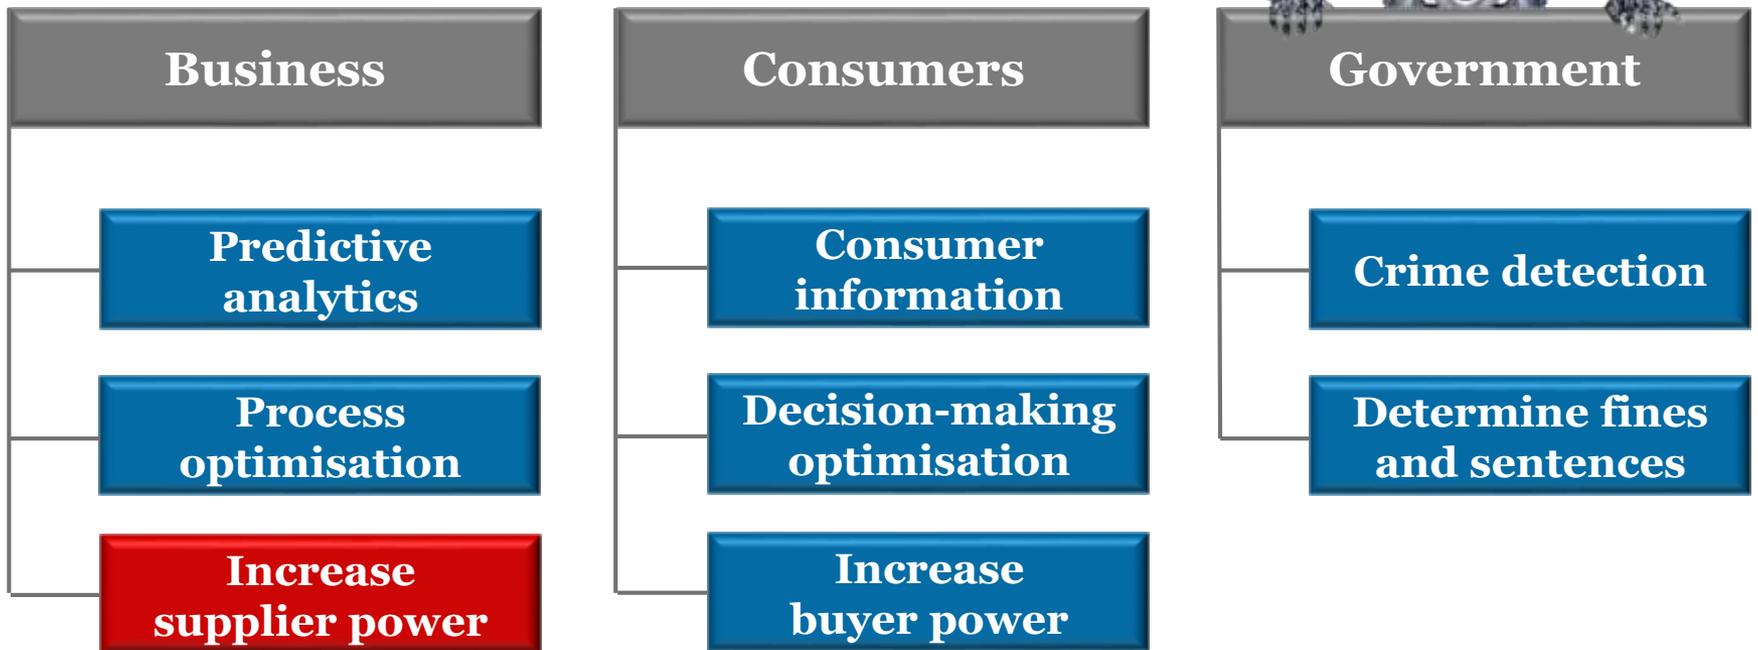

- Detect and classify deep-sea animals
- Estimate concentrations of chlorophyll

## Sound and Image

- Colorize black and white images
- Add sound to silent movies

# MAIN AREAS OF USE

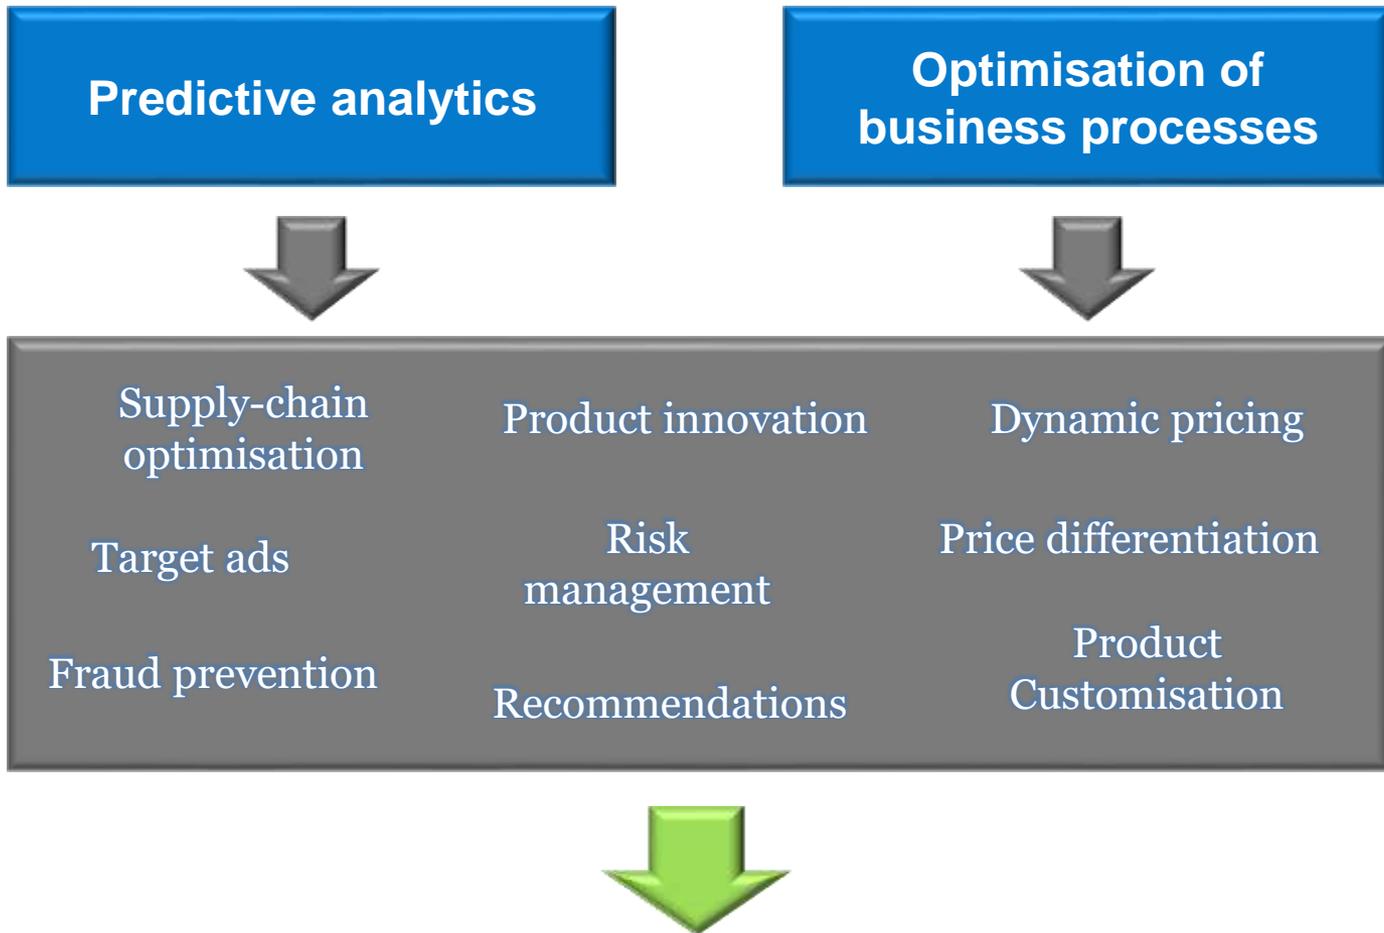

Positive impact on static and dynamic efficiency

# MAIN AREAS OF USE - BUSINESSES

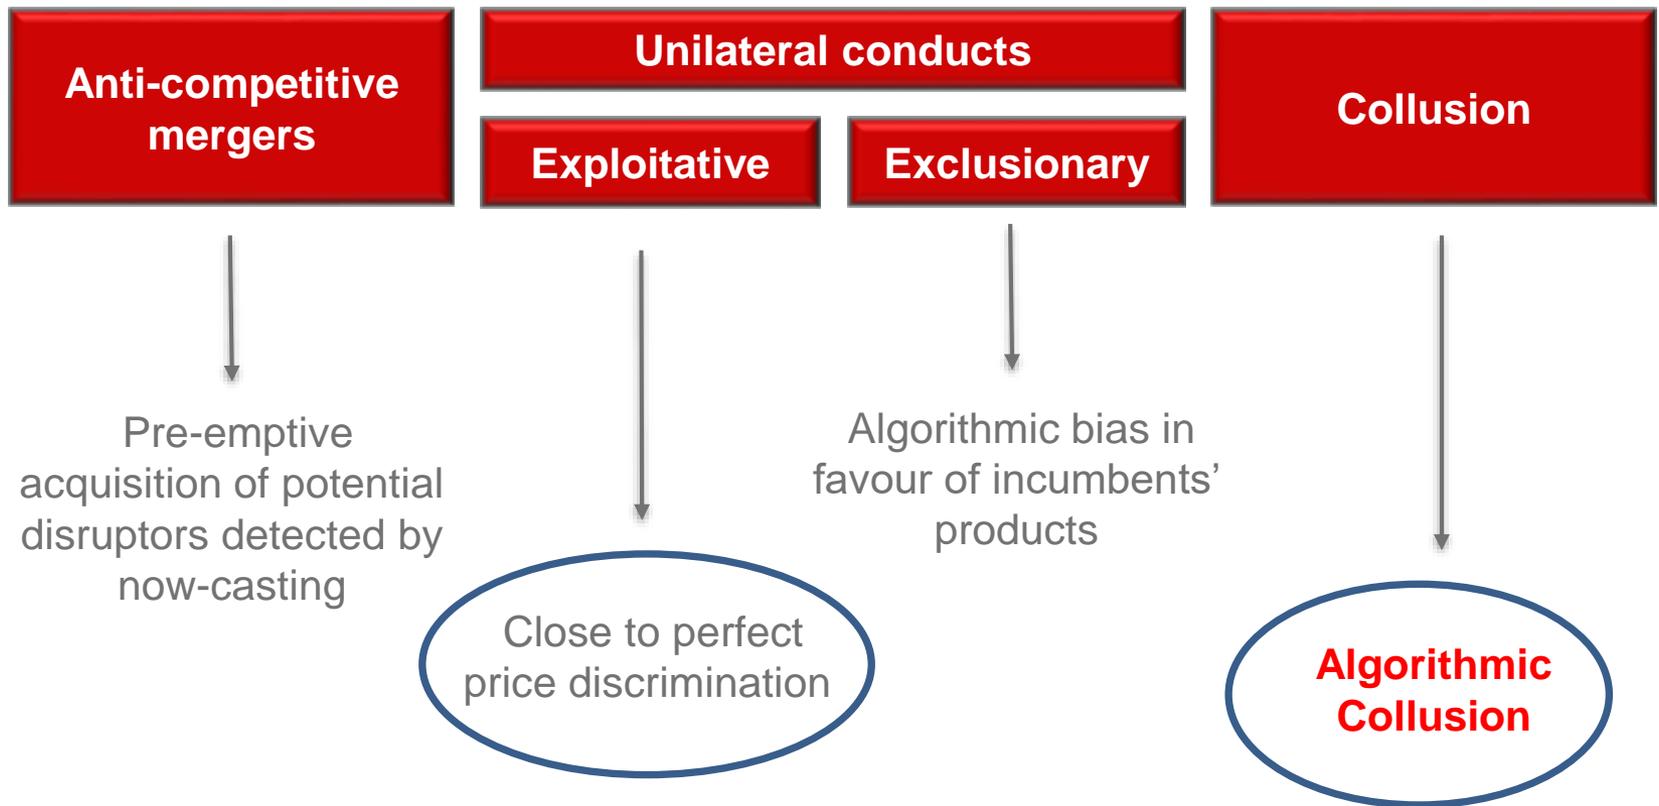

- Pro-competitive use of algorithms by businesses

**Positive impact on static and dynamic efficiency !!!!**

# ANTI-COMPETITIVE RISKS OF ALGORITHMS

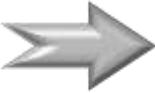

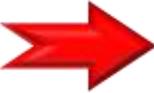

*Is there an enforcement gap?*

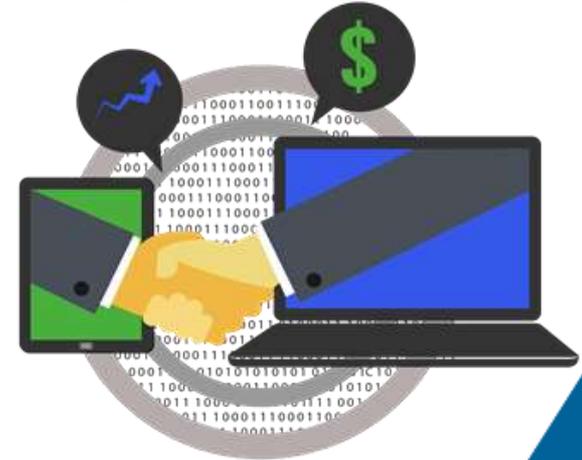

# NEGATIVE IMPACT => RISKS

ALGORITHMS may transform business models, decision-making process and commercial interactions

- ✓ They can facilitate the exercise of market power  Abuse of dominance
- ✓ algorithms change certain structural characteristics of the market -> increase the likelihood of collusion
- ✓ enable new forms of collusion  “ALGORITHMIC COLLUSION”

*“Algorithmic collusion consists in any form of anti-competitive agreement or coordination among competing firms that is facilitated or implemented through means of automated systems.”*

OECD: Roundtable on Algorithms and Collusion, June 2017

# ALGORITHMS - THE RELEVANT FACTORS FOR COLLUSION

| Relevant factors for collusion |                          | Impact of algorithms on the likelihood of collusion |
|--------------------------------|--------------------------|---|
| Structural characteristics     | Number of firms          | ±   |
|                                | Barriers to entry        | ±   |
|                                | Market transparency      | +   |
|                                | Frequency of interaction | +   |
| Demand variables               | Demand growth            | 0   |
|                                | Demand fluctuations      | 0   |
| Supply variables               | Innovation               | -   |
|                                | Cost asymmetry           | -   |

Legend: + positive impact; - negative impact; 0 neutral impact; ± ambiguous impact

# ALGORITHMS - THE RELEVANT FACTORS FOR COLLUSION

| Relevant factors for collusion |                                 | Impact of algorithms on the likelihood of collusion |
|--------------------------------|---------------------------------|---|
| Structural characteristics     | Number of firms                 | ±   |
|                                | Barriers to entry               | ±   |
|                                | <b>Market transparency</b>      | <b>+</b>  |
|                                | <b>Frequency of interaction</b> | <b>+</b>  |
| Demand variables               | Demand growth                   | 0   |
|                                | Demand fluctuations             | 0   |
| Supply variables               | <b>Innovation</b>               | -   |
|                                | <b>Cost asymmetry</b>           | -   |

Legend: + positive impact; - negative impact; 0 neutral impact; ± ambiguous impact

# ALGORITHMS - THE RELEVANT FACTORS FOR COLLUSION

---

- Despite the ambiguous effects on the some factors for collusion - algorithms change certain structural characteristics of the market, such as **TRANSPARENCY** and **FREQUENCY OF INTERACTION**
- Intuition:
  - If markets are transparent and companies react instantaneously to any deviation, the payoff from deviation is zero -> **COLLUSION CAN ALWAYS BE SUSTAINED AS AN EQUILIBRIUM STRATEGY**
- **Clear risk** that current changes in market conditions may facilitate anti-competitive strategies
  - similarities with the classic ‘oligopoly problem’ **BUT** tacit collusion could become sustainable in a wider range of circumstances -> expanding the oligopoly problem to non-oligopolistic market structures

# ALGORITHMS and “TRADITIONAL” CARTELS

---

## **Coordination**

Algorithms coordinate parallel behaviour by programming prices to follow a leader; or using the same third party algorithm.

---

## **Monitoring & punishing**

Algorithms collect and process information from competitors and punish deviations

---

## **Signalling**

Algorithms disclose and disseminate information in order to announce an intention to collude and negotiate the common policy.

---

# ALGORITHMS and “TRADITIONAL” CARTELS – WHAT ARE THE CHALLENGES?

---

- Is the legal framework on anti-competitive agreements suitable to assess algorithms?
  - => Agencies can rely on existing rules on anti-competitive agreements
  - => Algorithms ought to be assessed together with the main infringement that they help enforcing.
- Challenges relate to:
  - Detection and evidence
  - Understanding how the technology works

# ALGORITHMS and “NEW” FORMS OF TACIT COLLUSION? – WHAT ARE THE CHALLENGES?

---

- Is the legal framework on anti-competitive agreement suitable to assess algorithms?
  - => Tacit collusion is not covered by the legal framework
- Policy question:
  - => Should we adjust the legal framework?
  - => How?

# THE POLICY QUESTION

*The only time we look at tacit collusion is when we look at ex ante analysis of mergers. Here we have an interesting question about legality and policy (...) The fact that [algorithms] can change the market characteristics gives rise to concern. That concern cannot be attacked under 101. Should we do something about it?*

Ariel Ezrachi

*(...) if we don't know the importance and the magnitude of the problem then it is very difficult to conclude that there is an enforcement gap.*

BIAC

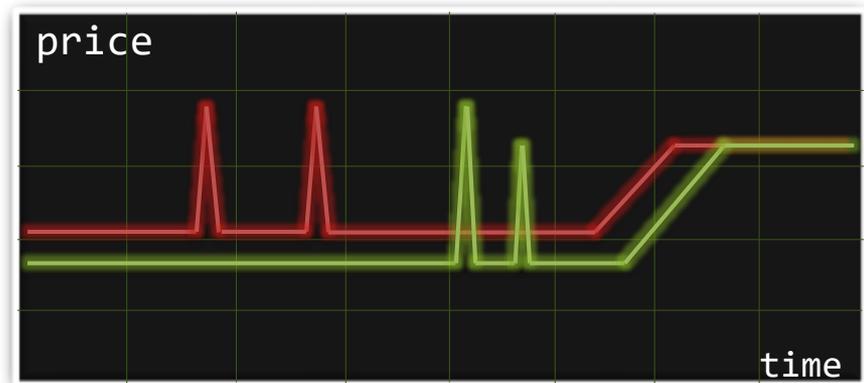

*Competition laws were designed to deal with human facilitation of parallel conduct. (...) However, in a world in which tacit collusion becomes or is operated on a larger scale, maybe we need to rethink the reasons why we decided not to tackle tacit collusion in the first place.*

Michal Gal

# THE POSSIBLE ROLE OF COMPETITION AUTHORITIES

- **Expand existing antitrust tools in order to deal with algorithmic collusion**
  - Market studies & investigations
  - Ex-ante merger control
  - Commitments & remedies
- **Rethink traditional antitrust concepts?**
  - Tacit collusion
  - Agreement
  - Liability

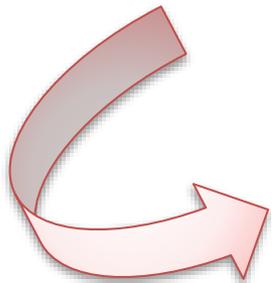

# SOME REMEDIES OUTSIDE ANTITRUST

---

- Recent proposals to enforce algorithmic transparency & compliance by design with existing regulations
- Difficulties:
  - Incentives for investment and innovation
  - Complexity of program codes
  - Enforcement costs

Risk that algorithmic transparency facilitates further algorithmic collusion

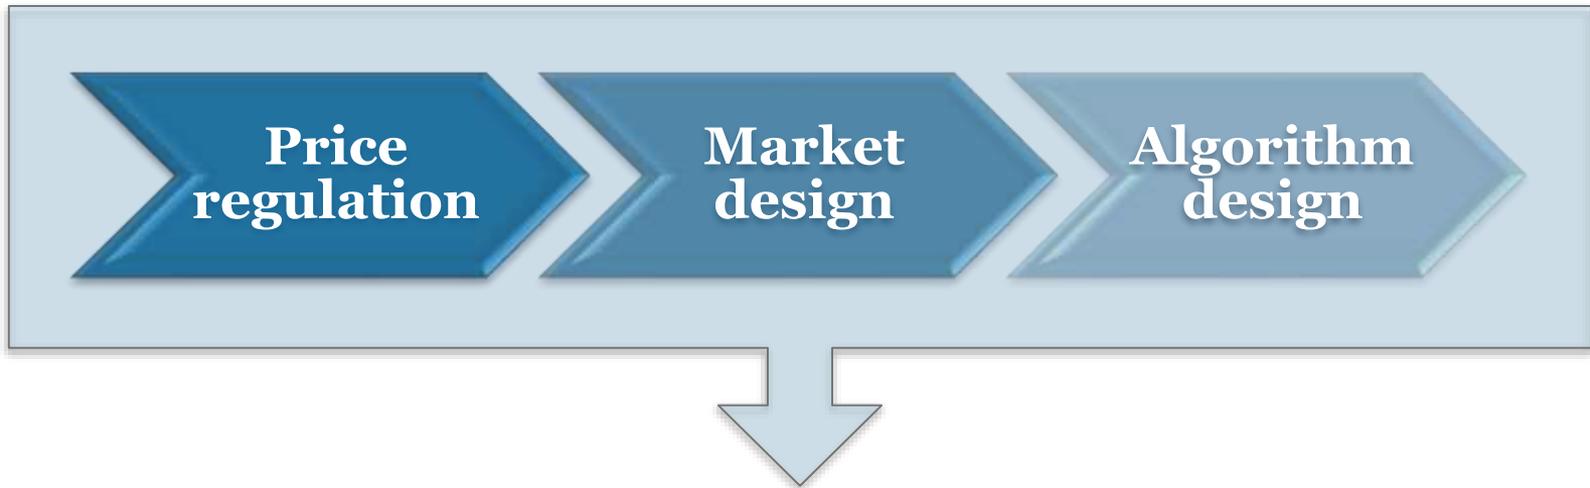

## POSSIBLE REGULATORY ACTIONS...

---

- Extreme forms of algorithmic collusion may be hard to prevent through competition law
- As a result, should regulatory interventions to prevent algorithmic collusion be considered in the future?

***Risk of competitive impact***

# FURTHER INFORMATION

**ALGORITHMS AND COLLUSION**  
Competition policy in the digital age

OECD

The screenshot shows the OECD website page for 'Algorithms and collusion'. The page title is 'Algorithms and collusion' and the subtitle is 'Competition policy in the digital age'. The page content includes a navigation menu with 'OECD Home', 'About', 'Countries', and 'Topics'. The main content area features a sidebar with a 'Competition' section containing links to 'Abuse of dominance and monopolisation', 'Cartels and anti-competitive agreements', 'Competition enforcement practices', 'Liberalisation and competition intervention in regulated sectors', 'Mergers', and 'Pro-competitive Policy'. The main text area discusses the combination of data with technologically advanced tools such as pricing algorithms and machine learning, and mentions a roundtable held in June 2017. An illustration of a hand holding a laptop with a dollar sign and a globe is also visible.

# FURTHER INFORMATION

The screenshot shows the OECD website's Competition page. At the top left is the OECD logo with the tagline "BETTER POLICIES FOR BETTER LIVES". To the right is a search bar with "Search oecd.org" and a magnifying glass icon. Below the logo is a navigation menu with "OECD Home", "About", "Countries", "Topics", and "Français". The breadcrumb trail reads "OECD Home > Directorate for Financial and Enterprise Affairs > Competition". The main heading is "Competition".

**Competition Assessment Review of...**

Well-designed competition law, effective enforcement and competition-based economic reform promote growth and employment. The OECD actively encourages governments to tackle anti-competitive practices and fosters market-oriented reform throughout the world.
